Business Analytics / Descriptive Analytics Course

Power BI Dashboard and Operations

RetailPulse Sales Report

Name	Devansh Singh
Roll No.	22
University Roll No.	1250258183
Submitted to	Miss Monica
Dataset	RetailPulse (Sales, Product, Store)
Tool	Microsoft Power BI (Power Query, Data Model, DAX, Report view)

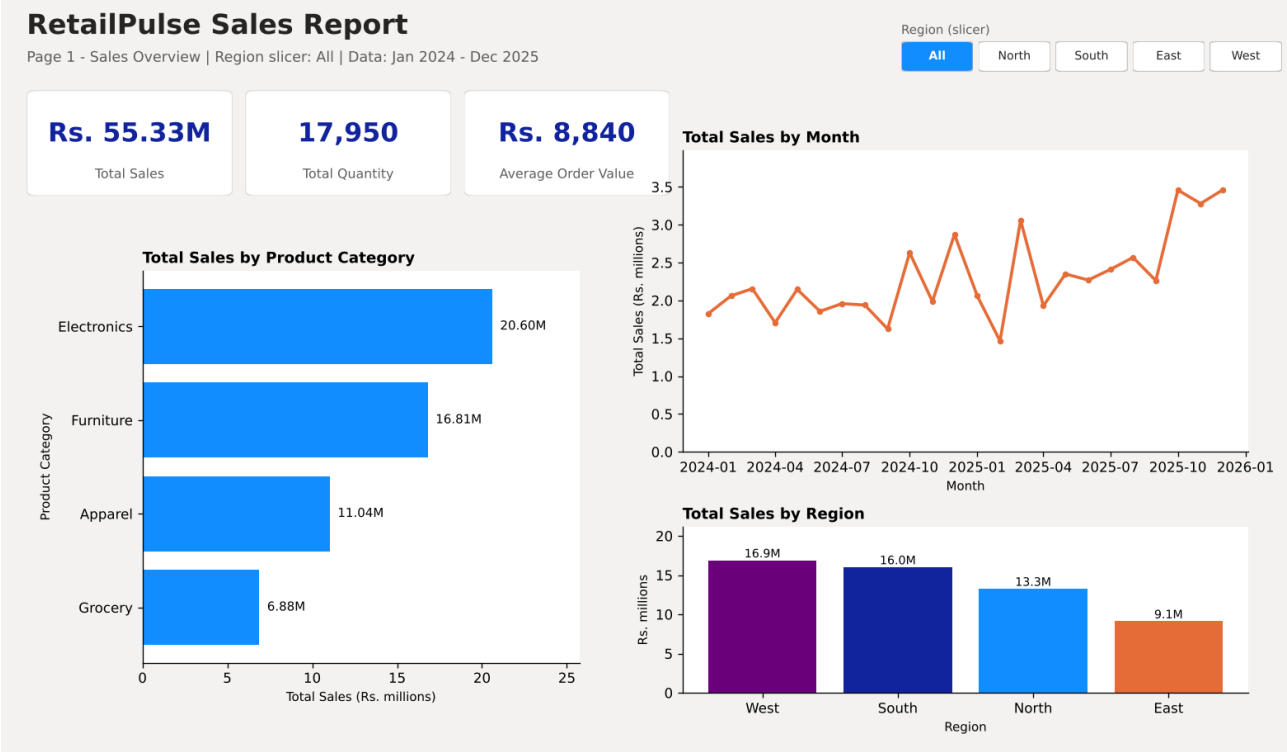

Operations performed in Power BI

• Practical 7: imported RetailPulse workbook, set data types, removed blanks/duplicates, replaced nulls, added Sale Size conditional column, Close & Apply.
• Practical 8: built one-to-many relationships, wrote Total Sales / Total Quantity / Average Order Value measures and Sales per Unit column, built the interactive report and cross-filtering with the Region slicer.
• Practical 9: created a Date table, wrote Sales YTD, Sales LY, YoY Growth % (with VAR) and Region Share % (CALCULATE + ALL), built the matrix, and set up the Performance Analyzer review.

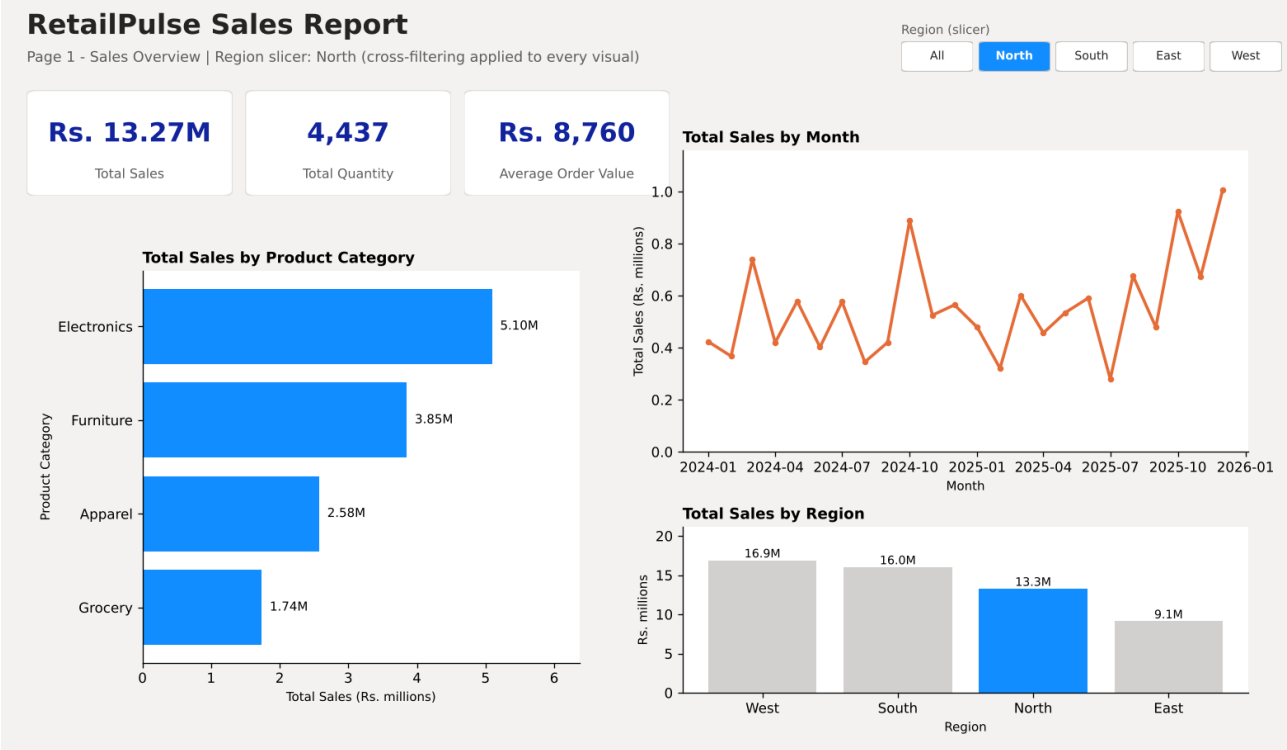

Method note: the transformations, measures and charts in this record were produced from the RetailPulse dataset using equivalent logic outside Power BI Desktop. Performance Analyzer timings and publishing to the Power BI service were not done, and are left for completion in Power BI.

Power BI Dashboard: RetailPulse Sales Report

Region slicer = All

Region slicer = North
